

DIMAS ARYA RAMADHAN SETIAWAN

Indramayu, West Java, Indonesia | +62 878-9481-8389 | dimsaryars2215@gmail.com | GitHub | GitLab | LinkedIn | Portofolio

PROFILE

Software Engineering (D4) graduate from Politeknik Negeri Indramayu with hands-on experience across Software Development, Mobile Development, and AI/ML Engineering. As a Software Developer, I build and maintain production systems using Laravel, MySQL/PostgreSQL, and RESTful APIs, including leading technical direction (tech stack selection, task delegation, architecture design, and code review) for two campus systems. As a Mobile Developer, I build cross-platform apps with Flutter. As an AI/ML Engineer, I've fine-tuned deep learning models for image classification, built RAG pipelines and LLM tool-calling systems, and handled agentic AI projects end-to-end. Comfortable working independently in remote, Agile environments, and always looking to build things that go beyond theory into real, usable systems.

EDUCATION

Politeknik Negeri Indramayu (POLINDRA) — Indramayu, Indonesia <i>D4 (Applied Bachelor) in Software Engineering</i>	2022 - 2026
SMA Negeri 1 Sindang — Indramayu, Indonesia <i>Science (IPA)</i>	2019 - 2022

SKILLS

Languages: PHP, JavaScript, Python, Dart

Frameworks & Technologies: Laravel, Flutter, RESTful API, Tailwind CSS, Bootstrap CSS, FastAPI, Next.js, React, Inertia.js

AI & Machine Learning: Deep Learning, PyTorch, TensorFlow, Computer Vision, CNN, Vision Transformer, Natural Language Processing (RAG), LLM Integration, Prompt Engineering, LSTM, Agentic AI, Voice Recognition (Whisper), Text-to-Speech, Image Classification

Databases & Tools: PostgreSQL, MySQL, SQL, Git, Docker, Supabase, DBeaver

Soft Skills: Leadership, Teamwork, Time Management, Public Speaking, Brainstorming

EXPERIENCE

Researcher & Fullstack Developer — Undergraduate Thesis Research, POLINDRA *Feb 2026 - Aug 2026*

- Developed a rice plant disease classification system integrating leaf image data with IoT sensor readings for temperature and humidity.
- Implemented and benchmarked deep learning models, including Swin Transformer, ViT, EfficientNet, ResNet, and Inception, for leaf disease detection, achieving 93.55% accuracy and 95.35% F1-score with a 14-class combined-dataset Swin Transformer model.
- Integrated a Large Language Model with a Retrieval-Augmented Generation (RAG) pipeline, using sentence embeddings and FAISS vector search, to generate automated disease-handling recommendations from classification results and sensor data.
- Built an end-to-end pipeline from mobile image capture and IoT data fusion to LLM-based recommendation output using Python and Flutter.

Fullstack Developer (Flutter + FastAPI) — Byanice AI Personal Assistant, Self Project *Mar 2026 - Present*

- Built an AI-powered personal assistant application using Flutter for mobile and FastAPI for backend, with agentic LLM capabilities via Groq (LLaMA 3.3).
- Implemented voice input (Whisper speech-to-text) and text-to-speech (ElevenLabs/gTTS) for natural voice interaction.
- Designed an agentic tool-calling system, using prompt engineering, enabling the AI to open apps, send WhatsApp messages, control Spotify, set reminders, and check real-time weather.
- Used Supabase for authentication and user preference management.

Frontend Developer — Personal Portfolio Website, Self Project *Sep 2025 - Present*

- Built and continue to maintain a personal portfolio website using Next.js and React 19 with TypeScript.
- Implemented a component-based architecture (Hero, About, Skills, Projects, Contact) styled with Tailwind CSS, with animations built using Framer Motion.
- Configured SEO essentials (sitemap, robots.txt) for better search visibility.

Backend Developer Intern (Remote) — Icubic *Jan 2026 - Aug 2026*

- Started as a Backend Developer Intern; while learning Inertia.js and Express.js, was temporarily assigned to manual QA testing to contribute meaningfully during the ramp-up period.
- Performed manual QA testing using Excel for test case documentation and Selenium for automated test scripts.
- As backend developer, connected Laravel to a React frontend using Inertia.js, and built APIs in Express.js.

- Participated in weekly Scrum meetings while working fully remote, coordinating both testing and development cycles with the team.

Fullstack Developer Intern — MyBTP Super App Web Based, Bandung Techno Park *Jul 2025 - Dec 2025*

- Developed a Laravel backend and Tailwind CSS frontend for a web-based application supporting external grants.
- Collaborated with the team to define the design and key features for external grants.
- Built the backend system and database using PostgreSQL, writing and optimizing SQL queries for the application's data workflows.
- Used GitHub for version control and collaborative development.

Machine Learning Engineer — MBKM DBS Foundation Program *Feb 2025 - Jul 2025*

- Participated in a 6-month industry-based learning program focused on machine learning and AI applications.
- Developed an emotion detection system (Rasa Kata Project) using an LSTM model built with TensorFlow, converted to TensorFlow Lite, and served through a Flask REST API.
- Containerized the AI model with Docker and integrated it with an Express.js backend for seamless real-time predictions.
- Used GitHub for version control and collaborative development.

Technical Lead & Fullstack Developer — Innovation and Research Dashboard, POLINDRA *Sep 2024 - Feb 2025 (team) · Jan 2026 - Jun 2026 (solo, continued)*

- Led technical direction for the team, including tech stack selection and task delegation (Sep 2024 - Feb 2025).
- Developed the Laravel backend and MySQL database, implemented AJAX-based form validation to reduce submission errors, and built RESTful APIs consumed by a companion mobile app.
- Participated in feature planning, testing, bug fixing, and continuous improvements with the project team.
- Continued solo development of the system (Jan 2026 - Jun 2026), alongside maintaining the Intellectual Property System.

Technical Lead & Fullstack Developer — Intellectual Property System, POLINDRA (Campus Project) *Sep 2023 - Feb 2025 (team) · Jan 2026 - Jun 2026 (solo, continued)*

- Led technical direction for the team, including tech stack selection, task delegation, and system architecture design (Sep 2023 - Feb 2025).
- Developed core application features using Laravel, MySQL, and AJAX-based form validation, including authentication and role-based dashboards, in active production use by the POLINDRA academic community.
- Designed and implemented RESTful APIs, integrating them with the Innovation Dashboard for cross-system data exchange.
- Integrated a payment gateway and built email notification functionality to automate system events.
- Conducted code reviews and system analysis, database design, functional testing, and bug fixing to maintain quality across the team.
- Continued as sole developer and maintainer (Jan 2026 - Jun 2026), handling bug fixes and feature updates independently.

CERTIFICATIONS

Coding Camp powered by DBS Foundation — Machine Learning Engineer Specialization, Dicoding x DBS Foundation, Jul 2025

Machine Learning Terapan — Dicoding Indonesia, Jun 2025

Belajar Analisis Data dengan Python — Dicoding Indonesia (Google Developers Authorized Training Partner), Mar 2025

Belajar Dasar Structured Query Language (SQL) — Dicoding Indonesia, Feb 2025

Belajar Dasar Visualisasi Data — Dicoding Indonesia, Feb 2025
